NEW PUBLISHED ARTICLE

Fuel Design and Audits

In the latest September issue of the Nuclear Engineering International (NEI) Magazine, Mr Alfred Strasser published an article on “Fuel Vendor Audits”. Alfred Strasser explains why the current goal of zero emissions has led to a situation where the utilities have the added responsibility of exercising QA over the design and fabrication of the fuel at the vendor’s facilities.

NEW TOOL

The AWIKI

ANT International is currently developing the ANTI International Nuclear Wikipedia, AWIKI, which will enable you to quickly find the information you are looking for to resolve various fuel performance issues. Uptil now more than 30 reports and 9000 pages from the ZIRAT and IZNA Program have been added to the AWIKI. In step two the AWIKI will include water chemistry and structural material integrity information. The AWIKI has similar structure as the Wikipedia with a powerful search tool to quickly retrieve the information you are interested in and it will also direct you (via links) to information/reports with much more details. The AWIKI is continuously updated with the most recent information. It will become available in the beginning of 2011.

International Nuclear Power Chemistry Conference 2010 in Quebec City

Two LCC Network Experts, Dr Francis Nordmann and Dr Suat Odar, were representing ANT International at the Nuclear Plant Chemistry Conference, in Quebec City, on 3–7 October 2010. This conference is held every other year and the next one will be in Paris, October 2012.

“It has been a great opportunity to present ANT International Products & Services in an oral session of this key conference for chemists, with 280 participants from 30 countries.

In addition to gathering a lot of information, we had the possibility to discuss with many clients and listen to the needs of potential ANT International customers. The key information from this conference will be presented at the next LCC6 Seminar in February and March 2011, in Florida and Croatia respectively.”
